```
1 import coloredlogs, logging
2
3 # Create a logger object.
4 logger = logging.getLogger()
5
6 # By default the install() function installs a handler on the root
   logger,
7 # this means that log messages from your code and log messages from the
8 # libraries that you use will all show up on the terminal.
9
10 # coloredlogs.install(level='DEBUG')
11
12 # If you don't want to see log messages from libraries, you can pass a
13 # specific logger object to the install() function. In this case only
   log
14 # messages originating from that logger will show up on the terminal.
15 coloredlogs.install(level='DEBUG', logger=logger)
16
17 # Some examples.
18 logger.debug("this is a debugging message")
19 logger.info("this is an informational message")
20 logger.warning("this is a warning message")
21 logger.error("this is an error message")
22 logger.critical("this is a critical message")
```
